Cosmology is the study of the Universe -- its origins, evolution, future, and our place within it as humans. Scientists study cosmology, but cultures have also developed their own cosmologies in the form of myths. In this assignment, you'll use your creativity to summarize cosmology as seen by a culture of your choosing (real or imaginary are both acceptable). You can write about the cosmological mythology of the Dogon in Africa (look them up! it's fascinating), the Whos of Whoville, the imaginary society of fleas living on your dog's collar, a group of people the size of atoms, or anything else you can imagine.

In the first week of class, we discussed the elements that make up cosmology. These include the interaction of space and time, the size of the whole Universe, and the elements that make it up, as well as many more characteristics. When you are designing your culture's understanding of their Universe, consider the topics that we decided in class were important when describing space and time. Also consider the types of questions you think cosmology should try to answer. For this assignment, all you need is your imagination and the notes from our class discussion, but if you do use any outside sources you must be sure to cite them.
